midPhase Launches Web Design Service

Design-PHASE promises five pages in five days

Chicago, IL, January 29, 2007: midPhase Services, Inc, a full-service Web hosting provider offering managed and shared service for consumers and small- to medium-sized businesses, announced today that it has launched its long-awaited Web design service.

"We've spent a lot of time thinking of the best way to do this," says Dan Ushman, co-founder and vice president of marketing for midPhase. "We have come up with a simple, fast and uniquely tailored service called Design-PHASE. You get five custom-designed pages, finished in just five days, for a very affordable price."

Customers receive one-on-one service with a talented designer from midPhase's design team. This person would manage all of midPhase's in-house design work and will work with the customer to achieve a result tailored to meet his or her needs, adds Ushman.

According to Ushman, all code written is W3C compliant and the designs look the same in every browser. There are no templates and customers receive two revision rounds where "we can change things around and make it into what you want your site to look like," said Ushman.

In a promotion exclusive to current midPhase customers, the company is offering a free custom logo design and one additional page design also at no charge if an order is placed this week, between January 29th and February 2nd, 2007.
