

# How To Change Permissions On Files And Folders In CPanel

*This article contains information about changing permissions of files and folders.*

## Follow these steps to change permissions of a file:

- a. Start by logging into the your Control Panel at <http://yourdomain.com/cpanel> using your control panel username and password
- b. Next, click the **File Manager** (new) icon.
- c. Use the left directory panel to browse to the file/directory you'd like to change permissions for.
- d. Right-click a file or directory in order to use the management menu.
- e. Select **Permissions**.

Set the required permissions by checking the respective boxes. Click **OK** when ready.

You can also usually change permissions through a FTP client by right clicking on a file or folder.
