

# How To Configure A WordPress Domain For Midphase

*In order to configure your domain to work with your new Midphase WordPress hosting, you will need to login to your registrar's control panel and to change the nameservers to the following:*

[dns1.midphase.com](https://dns1.midphase.com)

[dns2.midphase.com](https://dns2.midphase.com)

[dns3.midphase.com](https://dns3.midphase.com)

*If you need an SSL certificate for your site, you can order an SSL certificate through your CHI control panel. The steps to do so can be found [here](#).*
